powerful 2D elastoplastic finite element stress analysis program for underground operations or. The difference between this device and our other models is that, according to the customer's drawings, it is possible to refine those indicators that are not in the basic model, to complete the device, its high-quality calibration and simulation of real stresses in the system. Series 3532, 3534, 3542 and 3543 Wound Wire Temperature Controllers. Designed to create intermediate temperature conditions in electric motors for the purpose of uniform heat transfer and stabilization of power supply to the winding. Devices of this series are installed in

cabinet or mobile control panels, where they increase the efficiency of power plants and other electric drives. The devices can be used to supply DC voltage to the supplied mains. The use of converters with parameters up to 120 kV makes it possible to provide isolation currents up to 0.64 $\hat{I}_{1/4}A$. Additionally, sensor functions can be implemented, for example: mass or volumetric temperature of the winding; issuing a signal when the temperature of the windings approaches critical values; control of the value of the magnetic flux on the collector; data transfer to the network about the winding wire. 370-250V $\hat{A} \pm 10\%$ when using mouthpieces Max., 80-85 Hz, setting resistor
